

Example of the exam display

The link "Exams" in the Harpo menu will take you to a page that initially shows no exam results, but towards the end of your learning it can look like the picture on the right (shown without the menu). This example shows that the student obtained 25,67 exam points from **Exam 1**, passing it and getting 13,67 grade points. After passing, she cannot take Exam 1 again.

She received 27 exam points from **Exam 2**, and the teacher credited one of her feedbacks with 0,5 points. This was a justification of a correct answer. It is much more probable to succeed with those than with excuses for wrong answers. Also, their credit would be either 0,33 or 1,33 points – resulting from zeroing the minus (−0,33), or fully accepting a wrong answer in case an MCQ is flawed.

The student has also passed **Exam 3**, but not with the first attempt that only brought 3 points. The second attempt was successful, with 12 points. She tried to improve that score by a third attempt but without success. The 8 points would not have even passed, but the second attempt suffices. In a real case the page would continue – as the notes say – with the main question from Exam 3, the student's answer, and teacher's feedback.

The page does not tell what the final grade will be. The student will clearly get at least 2 because her total grade points are 41,17. If she scored 9 from Harpo, she would get a 3, and so on. If she scored only 8 from Harpo, the grade would still be 2, and it does **not** suffice just to do more Harpo exercises for the missing 1 point. The Harpo points must be earned **before** Exam 2 or 3 that concludes the whole procedure. New Harpo points are wasted – gradewise, but not learningwise – if you don't take an exam after collecting them (and use its score for the grade). Exam 1 is an exception. If you are happy with grade one, it suffices to pass Exam 1 and collect enough Harpo points before expiry.

To improve her grade this student has an option, however. She still has **one attempt left for Exam 2**. She has used two attempts and the better result was 15,5 grade points. This came with 27 exam points out of 52, which is rather modest. If she can repeat at least that, having earned some more Harpo points, the grade will be improved. While there also seems to be one unused practice exam, this should not be a big trouble.

This is a summary of your exams on Cyber Security 1.

	Exam 1	Exam 2	Exam 3	
Passed	Yes	Yes	Yes	
Result so far +	13 ² / ₃ (25 ² / ₃)	15 ¹ / ₂ (27) *	3, 12, 8	Σ=41 ¹ / ₆
Number of attempts left	0	1	0	
Possible to do now		Yes		
Practice available now		Yes	(essay)	

Show the public questions from your last Exam 2

Fixed samples: [Exam 1](#), [Exam 2](#). [Explained example of this page.](#)

[Link for enrolling to any one of the three exams.](#) It is here that you reserve the time in an EXAM classroom. The EXAM system does not know and care, which of the three you are attempting, but there are two versions of the reservation for single and multiple attempts (55 and 115 mins). Be sure however, that you use the time and machine reserved for yourself to do your exam. There are some [instruction texts for preview in this link](#).

+) All results from Exam 3 and the best result (grade points) from Exams 1 and 2 are given. For Exams 1 and 2 the raw score (exam points) from the attempt is shown in parentheses. For Exam 3 a zero is shown, if the exam was taken but failed because of the Harpo part. In that case there exists no score for the essay answers.

*) The teacher evaluated your feedbacks in Exam 2 at 1/2 points, which are included in the grade points above.

Big essay question, your answers, and teacher's evaluations from your last Exam 3

Notes. These are from the last attempt that has been evaluated by the teacher. Only the big essay question and answer are included, but the teacher's evaluation may mention something about the 7 small essays as well, unless they are very clearly good or bad.
