

List of essays

This list shows essays that have been assigned a class by the teacher. Numbers (1), (2) and (3) represent the last writing stage that the teacher has evaluated. Those with a title **in boldface** and started by a **(4)** are directly related to the pool of "big" questions for Exam 3. Those essays were created during previous courses with a different procedure than in 2023—. (Especially *without AI*. Some also have different scoring. Note that the four early essays by the teacher (JK) can be viewed also in the [document that compares](#) them with AI output.).

Use this page to check that your own essays will not repeat existing ones but will find a different point of view. Especially pay attention to the numbers after # which indicate the original topic number in the handbook list (#0 is for separately agreed topics, and those without # are the early essays).

Please note that to learn most you should also read the teacher's final feedback, and often also the problem statements from stage 2. And in any case, these short texts do not represent the "whole truth" in a way that you should use them as sources for much more than further explorations. Some ready essays (i.e., starting with (3)) are/will be linked with gray colour to indicate that the others are more rewarding for you to read.

1 Information and threats

- (4) Ainia topic 1: **Public WLANs**
- (3) Aify [topic 1, #106]: What are ways malware can spread within legitimate software distributions?

2 Abstract security

- (4) JK-1 topic 2: **Requirements for a cybersec professional**
- (4) JK-2 topic 2: **Cyber security jobs**
- (4) Golliathuss topic 1: **Security testing**
- (4) Pop topic 2: **Smart cities**
- (3) Star [topic 2, #105]: Smart cities, authorities and misinformation
